**Novell® NetWare® 6, Support Pack 5**

In late July, 2004, Novell released Support Pack 5 for NetWare 6. We have tested it with the A+LS program and installer extensively; please note the following.

**For a new A+LS installation:** We found no issues concerning A+LS and NetWare 6, Support Pack 5, provided that Support Pack 5 is applied prior to installing A+LS. Note that after the installation of Support Pack 5, Java version 1.4.1. is upgraded to 1.4.2\_04 by the NetWare installer. This did not adversely affect the A+LS applications.

**Upgrading a server that already has an A+LS installation running to NetWare 6, Support Pack 5:** Before upgrading a NetWare 6 server, you will need to replace MySQL version 4.0.13 with the MySQL for NetWare, version 4.0.18. If the database is not upgraded, the server will abend if you shut down MySQL. The server could also abend during a reboot cycle. The steps for installing the later version of MySQL for NetWare can be found in the "ALS 3.0 Server Installation Guide", NetWare Version, Chapter 6, page 5, under "Troubleshooting and Installing".
